Professional Summary

Backend engineer with **5+ years** building and running distributed systems in **Java, Go and Python**: order-serviceability APIs handling **35M+ requests/day at sub-100ms p95**, Kafka event pipelines, multi-cloud services on Kubernetes, and ML/LLM features that made it to production. Comfortable owning a feature from tech spec through rollout and on-call; have led 3-4 engineer pods and a 17-engineer platform build while staying hands-on.

Selected Systems Built

- **Dynamic Serviceability (Bigbasket)**: runtime geo-serviceability in the Java order facade; 35M+ requests/day at sub-100ms p95
- **Incident AI (Princess Cruise Lines)**: Kafka pipeline, DistilBERT/Gemma clustering, parent-child ServiceNow tickets; 82% fewer primary tickets
- **CNAPP platform (Opsmotor)**: Java services that run as one process or as K8s microservices by swapping an in-memory event bus for SQS/SNS
- **Petri (Rakuten)**: Kubernetes-Job test runner with WebSocket live logs and remote breakpoints; 570 users migrated

Technical Skills

Languages:	Java, Go, Python, SQL, JavaScript/React	Cloud & Infrastructure:	Kubernetes (EKS/AKS), Docker, Terraform, AWS, Azure, GCP, CI/CD, Prometheus/Grafana
Backend:	Spring Boot, Vert.x, REST APIs, microservices, event-driven design, concurrency, caching	AI / ML in Production:	OpenAI API, LiteLLM, DistilBERT/Gemma fine-tuning, NLP clustering, RAG, Tesseract OCR
Data & Messaging:	Kafka, AWS SQS/SNS, Redis, PostgreSQL, MySQL, MinIO / S3, Jira & ServiceNow APIs	Practices:	System design, tech specs, capacity planning, zero-downtime migrations, DevSecOps

Professional Experience

Bigbasket(Recro payroll)

Bangalore, India

Apr 2025 - Present

SENIOR SOFTWARE ENGINEER (BACKEND · TECH LEAD)

- Built runtime serviceability-area computation in the **Java** order facade and core service, replacing statically drawn map hexagons with per-request geo lookups; holds **sub-100ms p95 at 35M+ requests/day** and exposes more FCs and SKUs to each customer location.
- Designed and shipped the invoice-GRN reconciliation service from scratch, tech spec to production: **Python + Tesseract OCR + OpenAI** pre-fills GST, IRN, invoice and line-item fields from scans, tallies PO/GRN/tax per SKU and pushes approvals to **Oracle Fusion**; receiving time down **50%**, reconciliation effort **~65%**.
- Owned the BBdaily to Bigbasket 2.0 migration with a team of 3: built the address-dedup algorithm (fuzzy string + geo distance + society boundary checks) and the subscription/wallet transfer jobs; piloted **5 societies with zero customer complaints**.
- Designed and implemented batch-level **FEFO** allocation and bin stacking in the inventory/order flow plus a daily QC cron that flags near-expiry bins for repack or write-off; got the spec approved, piloted, and handed over for the all-India rollout.
- Rolled out the org-wide **LiteLLM** AI gateway; migrated SSO/IAM across **17 AWS accounts**, GitHub and Jira with zero pipeline downtime.

Opsmotor

Bangalore, India

Jun 2024 - Apr 2025

SENIOR SOFTWARE ENGINEER, LATER TECH LEAD (CLOUD SECURITY PLATFORM, CNAPP)

- Designed and built the dual-mode runtime for the CNAPP platform and carried most of the monolith-to-microservices split: the same **Java** services run as one process on EC2 (shared-memory event bus) or as **Kubernetes** microservices with the queue switched to **AWS SQS/SNS** plus a coordinator node, with no code changes between modes.
- Developed the cloud connectors and asset-graph model for **AWS, Azure and GCP** (FQDN → certificate → Route 53 → load balancer → EC2 → EBS/RDS → snapshot lineage) for **1,000+ tenants**; added ingestion from Defender, CloudWatch, Jira, Slack and JFrog.
- Built security and compliance scanners on top of **Nmap, Trivy, Prowler and Kubescape** with custom de-duplication and false-positive suppression: **40% fewer false positives** than the clients' native scanners.
- Added LLM triage that explains CSPM/DSPM/CWPP/EASM findings and drafts remediation; technical owner of the **Rakuten** enterprise POC end to end (cluster deployment, architecture reviews, client demos).

Hughes Systique

Bangalore, India

Jul 2022 - May 2024

SOFTWARE ENGINEER · BACKEND & AI PLATFORMS (CLIENTS: RAKUTEN, PRINCESS CRUISE LINES)

- **Incident AI** (Princess Cruise Lines): designed and built the **Kafka-to-ServiceNow** pipeline (Java/Python) that collapses the 200-500 duplicate PagerDuty alerts a single ship fault generates: **DistilBERT** semantic first pass, then weighted **Gemma** clustering on similarity, fire zone, target and time, filed as parent-child tickets. **82% fewer primary tickets**; closure time down from **a week to about 2 hours**; led 4 engineers.
- **Petri** (Rakuten): owned the architecture of a Kubernetes test-automation platform that runs one K8s Job per test run, streams live logs and remote breakpoints over a **WebSocket** channel from container to execution engine, keeps scripts in Git and artifacts in **MinIO (S3)**, with RBAC via a user-management microservice. Sized and got prod clusters approved; **570 users** migrated in 2 months, delivery efficiency up **~30%**.
- **LMP** (Rakuten release portal): delivered new Jira-backed release workflows and automated image promotion through **JFrog** and X-Ray gates via webhooks; primary engineering contact for 1&1's on-prem deployment (notification jobs, SMS integration).

TCS

Bangalore, India

Jan 2021 - Jun 2022

SYSTEM ENGINEER (CLIENT: LEGAL & GENERAL — ENHANCED ANNUITY PLATFORM)

- Ported GAR/GMP annuity calculations from a Spring monolith and mainframe SQL to **Java 11 Azure Functions** behind **AKS** API gateways.
- Took over the rule-engine repo and moved **97%** of business logic into a metadata-driven DB rule engine so content ships without a release.
- Wrote the **Terraform** and CI/CD pipelines that provision dev, staging and production for the Azure Functions services.

Certifications & Training

Microsoft Certified: Azure Fundamentals (AZ-900) · AWS Solutions Architect – Associate (Udemy) · Applied ML & NLP (LinkedIn Learning)

Honors & Recommendations

2025	Project Lead Appreciation , ownership and on-time delivery of BBdaily migration & Finance Flow	Bigbasket
2024	Excellence in Product Leadership , CNAPP delivery and Rakuten POC; recommended by CEO & CTO	Opsmotor
2023-24	Rising Star Award , architecture and production delivery of Incident AI	Hughes Systique
2022	Star of the Year / Month , ownership of the EAP rule engine during the cloud migration	TCS

Education

NSS College of Engineering, Palakkad

B.TECH IN COMPUTER SCIENCE AND ENGINEERING

2016 - 2020

GPA: 8.27/10
